Below is a listing of all claims in the application with their status and the text of all active claims.

- (CURRENTLY AMENDED) An apparatus for cleaning eyeglasses, comprising
 - (a) a housing;
 - (b) a fluid reservoir;
 - (c) evacuation means for pressurized evacuation of fluid out of the fluid reservoir, wherein said evacuation means is constructed and arranged at least partially inside said fluid reservoir;
 - (d) two arms attached to the housing at their proximal ends and, extending from the housing,

wherein each arm has a wiping pad at its distal end and is spring-biased into its nominal orientation, such that the wiping pads may be compressed toward each other:

- (e) a atomiser trigger coupled to said activation means, wherein said atomiser trigger is located close to the proximal end of said arms, whereby the user can easily access the atomise trigger and instantly place the arms over the eyeglasses.
- 2. (ORIGINAL) An apparatus according to claim 1, wherein each arm is pivotally attached to the housing.
- 3. (ORIGINAL) An apparatus according to claim 1, wherein the evacuation means comprises a pump.
- 4. (ORIGINAL) An apparatus according to claim 3, wherein the pump is a manual pump.
- 5. (ORIGINAL) An apparatus according to claim 1, wherein the evacuation means comprises an aerosol system.

Appn. Number 10/823,247 (Philippe Meert) DRAFT Amnt.

- 6. (ORIGINAL) An apparatus according to claim 1, wherein the arms are fixedly attached to the housing and are formed from a resilient material.
- 7. (ORIGINAL) An apparatus according to claim 1, wherein at least one of the evacuation means and the fluid reservoir is mounted within the housing.
- 8. (PREVIOUSLY PRESENTED) An apparatus according to claim 1, further comprising a cover for sliding onto the housing covering the arms.
- 9. (ORIGINAL) An apparatus according to claim 1, wherein the fluid reservoir is substantially shape-retaining.
- 10. (ORIGINAL) An apparatus according to claim 9, wherein the fluid reservoir has a burstable seal

38. (CURRENTLY AMENDED) A method for cleaning eyeglasses comprising the steps of:

MEERT VERZEKERINGEN

- (a) a housing;
- (b) a fluid reservoir;
- (c) evacuation means for pressurized evacuation of fluid out of the fluid reservoir, wherein said evacuation means is constructed and arranged at least partially inside said fluid reservoir;
- (d) two arms attached to the housing at their proximal ends and, extending from the housing,

wherein each arm has a wiping pad at its distal end and is spring-biased into its nominal orientation, such that the wiping pads may be compressed toward each other;

(e) a atomiser trigger coupled to said activation means, wherein said atomiser trigger is located close to the proximal end of said arms, whereby the user can easily access the atomise trigger and instantly place the arms over the eyeglasses.

said atomiser causing said cleaning fluid to atomise said eyeglasses;

squeezing said arms together to cause said wiping pads to contact upon an upper and lower surface of said eyeglasses;

moving said wiping arms and wiping pads to cause said pads to dry and clean said eyeglasses;

releasing said arms to remove said eyeglasses.

39. (CANCELED)
